BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors. Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: Chaudhary, Sunita (formerly Sunita Ranjhan)

eRA COMMONS USER NAME (credential, e.g., agency login): CHAUDHS

POSITION TITLE: Associate Professor; Director, Research Education

EDUCATION/TRAINING (Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.)

| INSTITUTION AND LOCATION | DEGREE (if applicable) | Completion Date MM/YYYY | FIELD OF STUDY |
|--|---------------------------|-------------------------------|-------------------|
| University of Delhi, Delhi, India | BS | 05/1983 | Botany |
| University of Philippines, Los Banos, Philippines | MS | 05/1986 | Genetics |
| University of California, Davis, California, USA | PhD | 05/1991 | Genetics |
| Laboratoire de Genetique Moleculaire des Eukaryotes, Strasbourg, France | Post-doctoral fellowship | 08/1993 | Molecular Biology |
| Ciba-Giegy/Novartis, Research Triangle Park, North Carolina, USA | Post-doctoral fellowship | 05/1995 | Molecular Biology |

A. Personal Statement

I started my professional career with solid scientific research training in academia as well as industry and transitioned into biomedical research education and training. As Director of Research Education at Rutgers Cancer Institute of New Jersey, and Associate Professor, Surgical Oncology, Rutgers Robert Wood Johnson Medical School (RWJMS), I am now responsible for developing, implementing, and evaluating multidisciplinary training programs, courses, seminar series, and continuing education programs. I have developed and teach the Basics of Cancer Biology course for high school and undergraduate students, as well as Essentials of Investigator Initiated Clinical Research course for clinical fellows, and clinical research staff at Rutgers Cancer Institute since 2004 (course co-taught with other faculty). I teach scientific writing and presentation skills to students, as well as post-doctoral fellows. My teaching responsibilities also include the Molecular Medicine Seminar course for graduate students at RWJMS-Graduate School of Biomedical Sciences (course co-taught with other faculty). I organize and serve as Program Chair of Planning & Review Committee of the Annual Retreat on Cancer Research in New Jersey. Over 400 cancer researchers attend this conference across the tristate area of New Jersey, Pennsylvania, and New York with over 150 poster and podium presentations. I have served as a reviewer for individual training grants (F series) and R36 for NIH, and as a Team Member to review grants and portfolio of the New Jersey Bio-1 Workforce Initiative in Regional Economic Development (WIRED) program, with a goal to excite young, minority individuals about bioscience careers. In my prior position as Associate Director of the Baylor K30 program, I played a key role in developing and implementing the curriculum for the Baylor Clinical Scientist Training Program (CSTP), guiding fellows and junior faculty, and establishing inter-institutional affiliations and program policies. I am passionate about increasing diversity in the biomedical workforce. Towards this end, I have developed training programs in translational cancer research at Rutgers Cancer Institute including Rutgers Youth Enjoy Science program (previously Continuing Umbrella of Research Experience [CURE]) for under-represented minority high school, undergraduate students and teachers, and secured funding for these programs from NCI and philanthropic sources (as PI). The CURE program has trained over 100 youth from underrepresented groups in the past decade with excellent outcomes (100% of high school students in college and 91% of undergraduates pursuing graduate studies at top-tier Universities including Cornell, University of Pennsylvania, and Harvard, etc.). In summary, I have the background in scientific research and a record of accomplishment in successfully developing, implementing, and evaluating research-training programs that have impactful outcomes.

Ongoing and recently completed projects that I would like to highlight include:

NCI 1R25CA247785-02 Chaudhary (PI) 09/01/2020 – 08/31/2025 Rutgers Youth Enjoy Science

NCI 3R25CA247785-02S1 Chaudhary (PI) 09/01/2021 - 11/30/2022

Rutgers Youth Enjoy Science - DE&I Supplemental

NCI 1T32CA257957-01

Zong/Kang (PIs); Role: Program Evaluator, Program

Executive Director 04/01/2021-03/31/2026

Post-doctoral Training Program in Cancer Metabolism and Tumor-host Interactions

NCI 3P30 CA072720-20

Libutti (PI); Role: Director, Research Education 03/01/2019-02/29/2024 Cancer Center Support Grant

Bristol-Myers Squibb Chaudhary (PI) 05/01/2019-06/30/2020

Clinical Research Experience for High School Students

NIH 1DP7OD020314-01

Millonig/Yarmush (PIs); Role: Program Evaluator 10/01/2014-09/30/2019

Rutgers Interdisciplinary Job Opportunities for Biomedical Scientists (iJOBs)

The Edward W. and Stella C. Van Houten Memorial Fund Chaudhary (PI) 01/01/2017-06/30/2019 Clinical Research Experience for High School Students

B. Positions, Scientific Appointments, and Honors

Positions and Scientific Appointments

| 2021 – Present | Associate Professor, Surgery, Robert Wood Johnson Medical School |
|----------------|--|
| 2009 – 2021 | Adjunct Assistant Professor, Surgery, Robert Wood Johnson Medical School |
| 2009 – 2010 | Director, Centralized Education and Training Services, CINJ Shared Resource |
| 2005 - 2009 | Member, Centralized Education and Training Services, CINJ Operating Committee |
| 2005 - Present | Member, Centralized Education and Training Services, CINJ Curriculum Committee |
| 2002 - Present | Director, Research Education, CINJ, New Brunswick, New Jersey |
| 2000 - 2002 | Instructor, Pediatrics-Nutrition, Baylor College of Medicine, Houston, TX |
| 2000 – 2002 | Coordinator, Pediatric Endocrinology Fellowship Program, Baylor College of Medicine, Houston, TX |
| 1999 – 2002 | Associate Director, Clinical Scientist Training Program, Baylor College of Medicine, |
| 1000 2002 | Children's Nutrition Research Center, Houston, TX |
| 1997 – 1999 | Sponsored Program Coordinator, Texas Children's Cancer Center, Baylor College |

| 1996 – 1997 1995 – 1996 | of Medicine, Houston, TX Research Scientist, Ross Products Division, Abbott Laboratories, Columbus, OH Research Scientist, James Cancer Center, Ohio State University, Columbus, OH | |
|----------------------------|---|--|
| Honors | | |
| 2013 – 2016 | New York Academy of Sciences, Fellow, NeXXt Scholars Program | |
| 2010 | Honorary Recognition, Office for Diversity & Academic Success in the Sciences | |
| | (ODASIS), Rutgers, the State University of New Jersey | |
| 2002 | Recognition for dedication and outstanding contribution to Baylor Clinical Scientist | |
| | Training Program | |
| 1996 | Ross Pediatrics Award of Excellence | |
| 1993 | Fondation pour la Recherché Medicale, Paris fellowship | |
| 1992 | ARC (Association Pour La Recherché Sur Le Cancer, Paris, France) fellowship | |
| 1991 | University of Louis Pasteur (Strasbourg) Fellowship | |
| 1989 | Citation for Outstanding Performance in PhD Qualifying Exams | |
| 1984 – 1986 | International Rice Research Institute Fellowship | |

C. Contributions to Science

1. Use of Trisomic Analysis for isozyme gene location in Oryza sativa L.

During my M.Sc. at the International Rice Research Institute and University of Philippines, Los Banos, I made a significant contribution (as first author) towards mapping the genetic architecture of Oryza sativa L., using trisomic analysis. This study was the first demonstration of the use and efficiency of trisomic analysis for isozyme gene localization and assigned *Adh-1* to chromosome11, *Est-8* to chromosome 7, *Sdh-1* to chromosome 6 and *Pgi-1* to chromosome

- 4. This contribution established the use of the trisomic analysis technique for localization of biochemical markers, which were superior to morphological markers that were in use by plant breeders for crop improvements and initiated several other mapping studies of isozyme loci using trisomics to establish a linkage map.

- **2. Genomic Organization and Chromosomal localization of alpha-amylase genes in Oryza Sativa L.** During research for my PhD degree at University of California, Davis, I contributed (as first author) to the understanding of the genomic organization and chromosomal localization of the genes for α- amylase, alcohol dehydrogenase (Adh-2), and Em (an ABA-regulated gene expressed late in embryogenesis) on rice chromosomes by the analysis of primary trisomics and proposed a nomenclature for the rice α-amylase genes. The validity of the mapping approach was confirmed using Adh-1 as a control. The Adh-1 gene had been previously assigned to chromosome 11 using conventional techniques.

3. Regulation of Eukaryotic Transcription

During my post-doctoral training at Laboratoire de Genetique Moleculaire des Eucaryotes du CNRS, Strasbourg, France, I contributed (as first author as well as part of a team) to the

understanding of eukaryotic gene regulation through identification of chromatographically distinct TBP-containing complexes which mediated the effect of different transcriptional activators and identification of negative regulatory factors that played a role in cell-specific gene expression. The TATA-binding protein (TBP)-associated factors (TAFs) of TFIID play a central role in RNA polymerase II mediated transcriptional regulation.

Sequence-specific transactivators counteract topoisomerase II mediated inhibition of in vitro transcription by RNA polymerase I and II. *Nucleic Acids Research*, 1993, Vol. 21, No. 17, 4011-4018.
- 4. Recombinant production of gamma-linolenic acid in Saccharomyces cerevisiae

 As a research scientist at Ross Products Division, Abbott Laboratories I contributed
 (second author) as part of a team in cloning and overexpression of desaturases for the
 production of high levels of linoleic acid at levels up to 25% of the total fatty acids in yeast.

 When linoleic acid was provided as an exogenous substrate to the yeast cultures expressing
 the delta6-desaturase activity, the level of gamma-linolenic acid reached 10% of the total
 yeast fatty acids. Co- expression of both the delta6- and delta12-desaturase cDNA resulted in
 the endogenous production of gamma-linolenic acid. The yields of gamma-linolenic acid
 reached as high as 8% of total fatty acids in yeast. This work resulted in 12 approved patents
 (on which I am listed as an inventor) in addition to 3 publications.

 - c. Methods and compositions for synthesis of long chain polyunsaturated fatty acids. US Patent 6,410, 288 B1, Date of Issue 06/25/2002, Inventors: Deborah Knutzon, Pradip Mukerji, Yungsheng Huang, Jennifer Thurmond, **Sunita Chaudhary**.
 - d. β-casein expressing constructs. US Patent 6,287,866, Date of Issue 9/11/2001; Inventors: Pradip Mukerji, Steven A. Lemmel, Amanda Eun-Yeong Leonard, **Sunita Chaudhary**.
- 5. Understanding Interventions that Encourage Minorities to Pursue Research Careers
 Of particular relevance to the field of education are my contributions to educational research
 focusing on evaluating interventions that promote biomedical research career choice by minority
 youth. I am the PI of two IRB approved studies titled, "Evaluating Interventions that Promote
 Research Career Choice by Women or African-American, Hispanic, American Indian, or Pacific
 Islander Youth," and "Non-Academic Research and Research-Related Career Choice Of
 Graduate Students and Post-doctoral Fellows in Biomedical Sciences." These studies have
 resulted in poster presentation and peer reviewed publications.
