

ISSUE BRIEF | October 2025

Community College Approaches to Economic Development

Alysa Hannon, Allison Forbes, Michelle Van Noy, Marilyn Barger

Community colleges and their technician education programs can fill a critical role in regional economic development, yet their contributions often remain hidden. These institutions must respond to multiple audiences—students seeking economic mobility, employers requiring skilled workers, regional industries pursuing technological innovation, and communities striving for prosperity—while embedding themselves in broader economic development ecosystems that vary significantly in maturity and coherence. Some approaches to technician education have the potential to shift regional trajectories by improving local industrial advantage and job quality, but these connections are not always explicit or aligned with formal economic development priorities.

To better understand the role of community colleges in economic development, EERC examined this issue through the lens of technician education programs. We conducted case studies with eight community colleges across four different regions¹. We found that, through these programs, colleges implement a wide array of economic development-related activities and strategies across a variety of workstreams. Based on those activities, we identified four approaches to economic development for community colleges across three levels of engagement. Through them, colleges dynamically respond to multiple audiences, including their students, local employers, the regional industry, and the local community.

¹ For a full discussion of the study and its research methods, see the full report: *The Hidden Innovation Infrastructure Project: Understanding the Economic Development Role of Technician Education in the Changing Future of Work Final Report*. (October 2025). <https://sites.rutgers.edu/eerc-hii/publications>

These approaches represent overlapping functions of colleges; most colleges implement all four approaches in different ways. These [approaches can also represent how colleges implement their various activities](#) through different strategic orientations to their regional economic development ecosystems. As colleges have taken on more regional roles, industry-responsive and community-responsive approaches as well as their respective activities have become increasingly important.

FIRM-RESPONSIVE APPROACH

This approach centers [individual firms](#) as job creators, and responsiveness by the college to the voiced needs of employers with ad-hoc, highly customized programs.

STUDENT-RESPONSIVE APPROACH

This approach centers the [individual student](#) as the primary audience for the college, and a focus on enrolling as well as graduating students from their programs.

INDUSTRY-RESPONSIVE APPROACH

ROLE OF COLLEGE
KEY PARTNER

Market-coordinating
Industry associations

This approach centers the [regional industry](#), and a coordinated response to regional needs, which considers matches between local firms and workers, at scale.

COLLEGE ACTIVITIES

- Prioritize transferability of skills among firms in regional cluster
- Coordinate with other colleges (curricula, industry engagement)
- Facilitate linkages between firms within industry
- Consider regional industry processes (not just firm needs) in investment strategy (e.g., tech

EMPLOYER ACTIVITIES

- Prioritize transferable credentials
- Contribute to/use shared, industry assets (e.g., adaptable curriculum for industry-wide use)
- Coordinate needs with other local firms, institutionalize coordination via college-hosted assets (equipment, facility)
- Participate actively in college-led efforts (advisory boards, etc.)

COMMUNITY-RESPONSIVE APPROACH

ROLE OF COLLEGE
KEY PARTNER

Power-balancing
ED organizations

This approach centers the [local community](#) and regional labor market, and the use of the college's position to generate gains for workers as well as *better* matches between local firms and workers.

COLLEGE ACTIVITIES

- Advocate for higher wages/skills investments
- Integrate wraparound services via partnership with public sector
- Engage underrepresented groups via partnership with community organizations
- Engage community in strategic planning

ED PARTNER ACTIVITIES

- Support alignment of strategy between colleges and public sector agencies
- Elevate importance of hiring and wage commitments made by local firms
- Facilitate investments by the state in regional capacity of colleges

A REGIONAL ROLE FOR COMMUNITY COLLEGES IN ECONOMIC DEVELOPMENT

Technician education programs position colleges as important regional players in their local economic development ecosystems. As colleges align their programs with regional demand, they are increasingly coordinating skill needs across regional industries. Additionally, *how* colleges respond to those identified needs through the development and implementation of their programs significantly impacts the local community and shapes the regional labor market for workers.

Industry-responsive activities feature a market-coordinating role for colleges, as they coordinate shared skill needs among firms to meet regional industry demand. Industry associations are helpful partners to colleges in that work.

Community-responsive activities feature a power-balancing role for colleges, as they advocate for higher wages for workers and greater skill investments by firms. Public sector economic development organizations are key partners to colleges in that work.

RECOMMENDATIONS FOR ACTION FOR COMMUNITY COLLEGE PRACTITIONERS

Community colleges that serve as regional actors in their economic development ecosystems not only strengthen their technician education programs and their local economies but enhance the overall impact of the college. Below are recommendations for supporting colleges' regional institutional capacity:

1

ENGAGE LOCAL LEADERS & EMPLOYERS

Community college leadership and program staff for leading technician education programs engage in their regional ecosystems actively, both with regional employer associations and with economic development organizations, including the relevant public sector agencies.

2

FORMALIZE & INSTITUTIONALIZE PARTNERSHIPS

The most successful partnerships between colleges and regional economic development actors were formalized through the establishment of collaborative institutions often with a physical presence on campus.

3

INTEGRATE A REGIONAL E.D. VISION ACROSS THE COLLEGE

Successful technician education programs are well-integrated across the other workstreams of the college, reflecting collaboration across existing departments and partnership with college leadership in engaging the regional economic development ecosystem in a coordinated manner.

4

ADVOCATE FOR COLLEGE CAPACITY

For technician education programs to succeed, community colleges and their partners spread awareness of community colleges as important regional actors in their economic development ecosystems and advocate for resources that support colleges' regional institutional capacity.

About the Authors

Alysa Hannon is a Ph.D. student at Rutgers University, School of Management and Labor Relations.

Allison Forbes is Senior Vice President at the Center for Regional Economic Competitiveness (CREC).

Michelle Van Noy is the Director of the Education and Employment Research Center at the Rutgers School of Management and Labor Relations.

Marilyn Barger is the Senior Educational Advisor at Florida Advanced Technological Education Center of Excellence (FLATE).

Acknowledgements

The authors would like to thank the numerous people who contributed to this report. We are deeply grateful for the partnership of our eight case study colleges who spent time sharing insights on their work and made this research study possible. We are grateful to our colleagues on the project, Debra Bragg, Andrew Weaver, and James Jacobs, who provided ongoing advice and guidance for the project, as well as our research project advisory board members whose thoughtful suggestions guided this work. At EERC, Tracy Cangiano and Melissa Quaal skillfully provided research support through various phases of the project. The authors are solely responsible for any errors. The authors are grateful to the National Science Foundation for their financial support of this work.

The Education and Employment Research Center

Rutgers' Education and Employment Research Center (EERC) is housed within the School of Management and Labor Relations. EERC conducts research and evaluation on programs and policies at the intersection of education and employment. Our work strives to improve policy and practice so that institutions may provide educational programs and pathways that ensure individuals obtain the education needed for success in the workplace, and employers have a skilled workforce to meet their human resource needs. For more information on our mission and current research, visit smlr.rutgers.edu/eerc.

EERC Areas of Focus

Market Connections

Rutgers' School of Management and Labor Relations

Rutgers' School of Management and Labor Relations (SMLR) is the leading source of expertise on the world of work, building effective and sustainable organizations, and the changing employment relationship. The school consists of two departments—one focused on all aspects of strategic human resource management and the other dedicated to the social science specialties related to labor studies and employment relations. In addition, SMLR provides many continuing education and certificate programs taught by world-class researchers and expert practitioners. For more information, visit smlr.rutgers.edu.

National Science Foundation

The U.S. National Science Foundation (NSF) is an independent federal agency that supports fundamental research and education across all fields of science and engineering. In Fiscal Year 2022, its budget is \$8.8 billion. NSF funds research in all 50 states through grants to nearly 2,000 colleges, universities and other institutions. Each year, NSF receives more than 50,000 competitive proposals for funding and makes about 12,000 new funding awards. With a focus on two-year Institutions of Higher Education (IHEs), the Advanced Technological Education (ATE) program supports the education of technicians for the high-technology fields that drive our nation's economy. The program involves partnerships between academic institutions (grades 7-12, IHEs), industry, and economic development agencies to promote improvement in the education of science and engineering technicians at the undergraduate and secondary institution school levels. The ATE program supports curriculum development; professional development of college faculty and secondary school teachers; career pathways; and other activities.
