Submission of HW's and Papers
(Revised 2-8-26, several slides)

Submissions to: jussim@scarletmail.rutgers.edu

HW's will generally be due the Friday after class at noon, except where otherwise noted. Loss of one point Haw's if later than noon on Friday. Loss of an additional point for each day late.

1. Word preferred.
2. Make sure your last name appears as the first word on all files for the assignment. (this makes it easier for me to keep track of them).
3. Include some unique description in all HW files (t-test, correlation, regression, etc.).
4. If computations or statistical programming and output are required for either the main assignment or extra credit, provide it, and the syntax (code) that produced the output.
5. When you use any program other than Excel or SPSS, please copy and paste the code and output into a Word file and submit that.

6. Please put HW (or "midterm paper" or "final paper") in the subject line of the email to me. If HW, put in a # or descriptor to distinguish it *from every other HW assignment.*

7. If you have produced computer output, make sure it is, if not outright *pretty*, at least comprehensible, as in, appropriately aligned,* and reasonably labeled.**

- E.g., if the output includes a table reporting t-values and p-values, the t-value should appear in the "t-value" column and the p-value should appear in the "p-value" column.

- ** Variables should be labeled by what they are. They should not be called "variable" or "var1." Score on an IQ test might be labeled "IQ."

EXTRA CREDIT

SPSS v. R

Up to 2 points per HW assignment.

For those of you who wish to program in R, you get an automatic 2 EC points if you produce and write up identical results using R & SPSS.

- 1point for a reasonable attempt
- 2 points for an attempt that succeeds.

But you must:

1. Hand in all programs and output
2. Write up whether your results were or were not identical, highlighting the relevant results in both SPSS and R that led you to your conclusion that the results were or were not identical.
3. Please copy and paste all R code and output into a Word file.
