

PAID RESEARCH STUDY: TEST OUT A WEBSITE EXPLORING CAREER AND TECHNICAL EDUCATION

This study aims to gather feedback on the experience of using a web-based toolkit for searching information on how to select, apply, enroll, study, and graduate from career and technical Education (CTE) programs.

CTE programs typically include specific occupational skill-based certificate or degree programs such as electrician, HVAC technician, dental hygienist, and home health aide.

You will spend time navigating the website's information, design, and features that help individuals understand CTE programs.

After exploring the website, we are asking for your feedback on how we can improve by completing a Qualtrics survey. The survey should take about 15 minutes to complete.

You will receive a **\$25 Amazon e-gift card** for completing the website review and survey.
