

# Case: Its Principles and its Parameters

Mark C. Baker

## Table of Contents

1. The issue of structural case
  - 1.1 Introduction: some challenges of structural case assignment
    - 1.1.1 The problem of language particular detail
    - 1.1.2 The problem of crosslinguistic generality
    - 1.1.3 The goals of the inquiry
  - 1.2 Related topics to be identified and put aside
    - 1.2.1 More on inherent case and how to recognize it
    - 1.2.2 Morphological as opposed to syntactic factors in case
  - 1.3 The structure of the book
  
2. The variable relationship of case and agreement
  - 2.1 Sometimes case is assigned via agreement
  - 2.2 Sometimes case is not assigned by agreement
    - 2.2.1 Case in languages with no evidence of agreement
    - 2.2.2 Issues with accusative case and object agreement
    - 2.2.3 Issues with ergative case marking
    - 2.2.4 Robustness of case across different clausal domains
  - 2.3 The alternative: Dependent case
    - 2.3.1 The leading idea
    - 2.3.2 Initial attractions of dependent case
    - 2.3.3 Comparison with some related ideas
  - 2.4 Is accusative case ever assigned by agreement?
  - 2.5 Case sensitive agreement
    - 2.5.1 Another way that agreement relates to case
    - 2.5.2 Integrating case-sensitive agreement into the picture
    - 2.5.3 Applying the idea: on the non-universality of case
  - 2.6 Conclusion
  
3. C-command factors in case assignment
  - 3.1 Positive c-command conditions
  - 3.2 When c-command does not hold: NP in PP
  - 3.3 Negative c-command conditions
    - 3.3.1 Negative c-command conditions versus markedness reversal
    - 3.3.2 Negative c-command conditions versus case assigned by agreement
    - 3.3.3 When c-command fails in languages with negative c-command conditions
    - 3.3.4 Japanese and Korean as marked nominative languages
  - 3.4 Conclusion
  
4. Domains of dependent case assignment
  - 4.1 CP-TP as a case domain
    - 4.1.1 Basics
    - 4.1.2 Edge effects
    - 4.1.3 Restructuring and dependent case assignment

- 4.2 VP as a distinct domain for case
  - 4.2.1 VP inhibiting case: differential object marking and beyond
  - 4.2.2 Special structural cases assigned in VP: dative, oblique, partitive
    - 4.2.2.1 Dative as high dependent case in VP: Sakha
    - 4.2.2.2 Oblique as low dependent case in VP: Chamorro
    - 4.2.2.3 Partitive as unmarked case in VP: Finnish
  - 4.2.3 On the variability of VP domain effects
    - 4.2.3.1 Choosing among the theoretical options
    - 4.2.3.2 Hard and soft phases in languages with negative c-command Conditions
- 4.3 Aspect phrases as phase: split ergativity (and accusativity)
- 4.4 Structural case in DP and NP
  - 4.4.1 Genitive as unmarked case in DP
  - 4.4.2 Ergative as high dependent case in DP
  - 4.4.3 On the absence of structural accusative case in nominals
    - 4.4.3.1 Possessors are not accusative
    - 4.4.3.2 Possessed nouns are not accusative
    - 4.4.3.3 Complements of nouns are not accusative
- 4.5 Conclusion

## 5. Categories involved in case interactions

- 5.1 NP, PP, and oblique NP
  - 5.1.1 PPs are not case competitors
  - 5.1.2 PPs versus dative objects: Warlpiri and Burushaski
  - 5.1.3 PPs versus dative subjects: Tamil
  - 5.1.4 Parameterizing the status of oblique NPs
- 5.2 Embedded clauses with and without nominalization
- 5.3 Phonetically null NPs
- 5.4 Nominal adverbs
- 5.5 Predicate nominals
- 5.6 Conclusion

## 6. On the timing of case assignment

- 6.1 On the underapplication of dependent case in structures with two internal arguments
  - 6.1.1 Dependent case in double object constructions
  - 6.1.2 The underapplication of dependent case with dyadic verbs
  - 6.1.3 Derivation by phase in languages with negative c-command conditions
- 6.2 Case-marked adverbs and cyclic derivation by phase
  - 6.2.1 Some immediate results
  - 6.2.2 Adverb-argument asymmetries due to the late spell out of adverbs
- 6.3 On the interaction of movement and structural case assignment
  - 6.3.1 Movement before or after case assignment?
  - 6.3.2 Case, movement, and the late spell out of adjuncts
  - 6.3.3 On case inheritance in chains
  - 6.3.4 On NPs receiving multiple case values
- 6.4 General conclusion
