

Your spit could decode kidney disease!

Scientists are studying how genes affect kidney disease. Whether or not you've been diagnosed, you help by giving a saliva sample.

This study is fully remote.

The more people who participate, the faster we can crack the code.

Anyone 18+ living in the U.S. can participate —
and receive a FREE genetic ancestry report!

1

Scan this QR code or visit:

kdstudy.org

2

Complete an online form about your health history.

3

Request and return your saliva sample using the provided kit.
