

Your saliva can help decode pulmonary hypertension

Scientists are studying how genes affect pulmonary hypertension. Whether or not you have PH you can help researchers crack the code that can improve the ability to treat or prevent PH.

This study is fully remote.

The more people who participate,
the faster we can crack the code.

Anyone 18+ living in the U.S. can participate—
and receive a FREE genetic ancestry report!

1

Scan this QR code or visit:
studyph.org

2

Complete an online
form about your
health history.

3

Return your
saliva sample using
the provided kit.
